Reasons for Allowance

1. Claims 1-28, 29-31 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The cited prior art taken alone or in combination fails to teach the claims invention of meta-classifiers (defining other classifiers), trained from a sample set, wherein a probabilistic approach involving the extraction of information using relevant decision criteria by the combining of evidence regarding the correctness of classification using classical outputs to included reliability indicators that point directly to an item's correct classification sequentially structured by means of a decision tree, internal nodes and leaf nodes.

The closest prior art (Gjerdingen et al, U.S. Patent 6,539,395) teaches a method for creating a database for comparing (classifying) music using feature vectors that are employed to compare music samples using a model to analyze data and perform a similarity computation (classification) that defines an optimum function that can represent similarity between music samples based on defined music attributes. Further, Gjerdingen teaches a decision tree is a procedure for classifying music into categories to their feature vector values. This method partitions music samples into mutually exclusive categories, wherein music samples within each category are considered similar. Notwithstanding such similarities in classification, Gjerdingen does not teach employing outputs from a plurality of classifiers to form the probabilistic classifier that combines evidence to include reliability attributes to establish correct classification.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
